

## THE MOORE BUILDING

At Anniversary, after the Alumni meeting, everyone gathered for the dedication of the Moore Building, the gift of Mr. Paul Moore, '04, who has not only presented the School with an excellent, well-furnished class-room building but also, through an additional gift, has assured its proper maintenance in the years to come.

All the Mathematics classes in the School will be held in Moore, which, moreover, within a few steps of the School House and of the Payson Laboratory, provides sufficient additional class-room space to make possible henceforth the holding of classes in all subjects in this one part of the School grounds. No longer will boys and men scurry back and forth between periods over great stretches of paths, wondering why in all the hundred years of the School's existence the Chapel bells and the various Study clocks have never been synchronized! Whereas we have been hurried and late before, we shall now be leisurely and efficient, as we profit from the development of the academic center of the School's campus.

The class-rooms of Moore are sunny and spacious; and they are equipped with modern desk arrangements and with the ample blackboard space that is dear to the heart of a Mathematics teacher. There extends across the southern end a large handsome room which will be used for lectures given to the upper Forms by the Mathematics and English Departments. This room will also be available for the many meetings and gatherings which take place during the School year — thus freeing areas which have been overtaxed. One room in the building has been set aside for a Mathematics library where the boys can read and study, and undoubtedly the Mathematics Society will hold its meetings in the building.

Moore is a wonderful and welcome addition to the School community, and many boys over the years will appreciate its attractive qualities as a place in which to learn their lessons.

GEORGE R. SMITH, '31
